Sequence 5, Application US/09733524A

Patent No. 6534298

GENERAL INFORMATION:
APPLICANT: Taylor, Diane E.

APPLICANT: Taylor, Diane E.

TITLE OF INVENTION: PUCCSILE ACIDS ENCODING ALPHA-1, 3

TITLE OF INVENTION: PUCCSILE ACIDS ENCODING ALPHA-1, 3

TITLE OF INVENTION: EVERESSING THEM (amended)

TITLE OF INVENTION: EXPRESSING THEM (amended)

FILE REFERENCE: 07254-049002

CURRENT APPLICATION NUMBER: US/09/733,524A

CURRENT PILING DATE: 1998-06-05

PRIOR FILING DATE: 1998-06-05

PRIOR FILING DATE: 1997-06-06

NUMBER OF SEQ ID NOS: 27

SOFTWARE: FREESEQ for Windows Version 4.0

Sequence 15, Application US/09733524

Sequence 15, Application US/09733524

Patent No. US20020068347A1

GENERAL INFORMATION:

APPLICANT: The Governers of the University of Alberta, a Canada Corporation

APPLICANT: The Governers of the University of Alberta, a Canada Corporation

APPLICANT: Taylor, Diane B.

APPLICANT: Taylor, Diane B.

APPLICANT: Taylor, Diane B.

TITLE OF INVENTION: PUCOSYLTRANSFERASES AND EXPRESSION SYSTEMS FOR MAKING AND

TITLE OF INVENTION: PUCOSYLTRANSFERASES AND EXPRESSION SYSTEMS FOR MAKING AND

TITLE OF INVENTION: PUCOSYLTRANSFERASES AND EXPRESSION SYSTEMS FOR MAKING AND

TITLE OF INVENTION: PUCOSYLTRANSFERASES

FILE REFERENCE: 07254/049002

CURRENT FILING DATE: 1998-06-05

PRIOR PILING DATE: 1998-06-05

PRIOR PILING DATE: 1997-06-06

NUMBER OF SEQ ID NOS: 20

SOFTHARE: FRASESEQ for Windows Version 4.0

SEQ ID NO 15

LENGTHER: TABLESSED AND SECTION 4.06

SEQ ID NO 15

LENGTHER: TABLESSED AND SECTION 4.06

SEQ ID NO 15

Sequence 47233, Application US/10449902
GENERAL INFORMATION:
APPLICANT: National Institute of Agrobiological Sciences.
APPLICANT: Bio-oriented Technology Research Advancement Institution.
APPLICANT: The Institute of Physical and Chemical Research.
APPLICANT: Foundation for Advancement of International Science.
TITLE OF INVENTION: FULL-LENGTH PLANT cDNA AND USES THEREOF
FILE REPERENCE: MOA-A02051-US
CURRENT APPLICATION NUMBER: US/10/449, 902
CURRENT FILING DATE: 2003-05-29
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

Sequence 15996, Application US/11056355B
; Publication No. US20060150283A1
; GENERAL INFORMATION:
; APPLICANT: Brover, Vyacheslav
; APPLICANT: Alexandrov, Nickolai
; TITLE OF INVENTION: Sequence Determined DNA Fragments and Corresponding
; TITLE OF INVENTION: Polypeptides Encoded Thereby
; FILE REFERENCE: 2750-1590FUG2
; CURRENT APPLICATION NUMBER: US/11/056,355B
; CURRENT FILING DATE: 2005-02-14
; PRIOR APPLICATION NUMBER: 60/544,190
; PRIOR PILING DATE: 2004-02-13
; NUMBER OF SEQ ID NOS: 119966
; SEQ ID NO 15996
         APPLICANT: Bio-oriented Technology Research Advancement Institution.
APPLICANT: The Institute of Physical and Chemical Research.
APPLICANT: The Institute of Physical and Chemical Research.
APPLICANT: Poundation for Advancement of International Science.
TITLE OF INVENTION: FULL-LENGTH PLANT CDNA AND USES THEREOF FILE REFRENCE: MOA-A0205Y1-US

New isolated fucosyltransferase polynucleotides and polypeptides, useful for synthesizing oligosaccharides, glycoproteins, or glycolipids. Helicobacter pylori fucosyl transferase, FutA, protein, SEQ ID NO: 20. Bezila DJ; Fucosyltransferase; protein production; enzyme Johnson KF, AEB70149 standard; protein; 456 AA. Helicobacter pylori; strain 948. (NEOS-) NEOSE TECHNOLOGIES INC. (UYAL-) UNIV ALBERTA. 22-JAN-2004; 2004US-00764212. 22-JAN-2004; 2004US-00764212. Simala-Grant J, Taylor D, (first entry) WPI; 2005-521417/53. N-PSDB; AEB70148. US2005164338-A1. 06-OCT-2005 28-JUL-2005. AEB70149; 

The present invention provides alpha-1,3/4-fucosyltransferase (also termed as fucosyltransferase) proteins and nucleic acids from various strains of Helicobacter pylori. This enzyme catalyzes the transfer of a fucose readiue from a donor substrate to an acceptor substrate. The fucosyltransferase polymucleotides and polypeptides are useful for the synthesis of oligosaccharides, glycoproteins and glycolipids. The present sequence is Helicobacter pylori fucosyltransferase protein. Claim 2; SEQ ID NO 20; 97pp; English.

Sequence 456 AA;

                                                                                                                                     108
fucose residue from a donor substrate to an acceptor substrate. The the discospitransferase polymucleotides and polypeptides are useful for the synthesis of oligosaccharides, glycoproteins and glycolipids. The present sequence is Helicobacter pylori fucosyltransferase protein fragment.
                                                                                                                                                                                    168
                                                                                                                                                                                                                                     228
                                                                                                                                                                                                                                                            205

The invention describes a complex of protein-protein interactions in Helicobacter pylori selected from 421 complexes given in the specification. The complex of protein-protein interactions are useful for screening for agents which modulate the interaction of proteins. Modulating compounds which binds to a targeted bacterial protein may be used for treating or preventing ulcers in a human or animal. This is the amino acid sequence of a selected interacting domain (SID), identified via protein-protein interactions. Where the patent number printed at the top of the pages in the specification has obscured areas of protein sequence, the indexer has replaced the residue with an X to

```

termed as fucosyltransferase) proteins and nucleic acids from various strains of Helicobacter pylori. This enzyme catalyzes the transfer of fucose residue from a donor substrate to an acceptor substrate. The fucosyltransferase polymicleotides and polypeptides are useful for the synthesis of oligosaccharides, glycoproteins and glycolipids. The present sequence is Helicobacter pylori fucosyltransferase protein. Note: The present sequence is the SEQ ID NO: 22 which is shown in the example 4 (figure 21) of the specification. This sequence differs from the SEQ ID

NO: 22 given in the sequence listing

The present invention provides alpha-1,3/4-fucosyltransferase (also

This invention relates to novel isolated polynucleotides and the encoded polypeptides thereof, which are related to the fucosyltransferase enzymes (PutA and PutB) of Helicobacter pylori (H. pylori). Specifically, it refers to alpha 1-3/4 fucosyltransferase enzymes that can be used to chemically synthesise glycoproteins and glycolipids with the desired oligosaccharide moieties (i.e. by transfer of a fucose residue to N-acetylglucosamine), such that they are useful in the preparation of glycoconjugates. The present invention describes how bacterial fucosyltransferase is unaffected by the sialyation status of the acceptor sugar, as opposed to the mammalian homologue, and furthermore, bacterially expressed enzymes offer a large cost saving relative to mammalian expression systems. This polypeptide sequence is an H. pylori strain 26695 FutA protein sequence of the invention.
                                                                                                                                                                         ö
                                                                                                                                                                                                                                228 EFLSQYKFNLCFENSQGYGYVTEKILDAYFSHTIPIYWGSPSVAKDFNPKSFVNVHDFNN 287
the protein or cell are useful in the development of assays to detect mammalian tumours. The present sequence represents an H. pylori alphal, 3 fucosyltransferase encdoed by the fucT gene. (Updated on 29-AUG-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated polynucleotide encoding fucosyltransferase protein, useful for synthesizing oligosaccharide moiety on a protein or lipid that is unglycosylated in its native form or for synthesizing glycolipids.
                                                                                                                                                                                                             225 BFLSQYKFNLCFENSQGYGYVTEKILDAYFSHTIPIYWGSPSVAKDFNPKSFVNVHDFNN

```
termed as fucosyltransferase) proteins and nucleic acids from various strains of Helicobacter pylori. This enzyme catalyzes the transfer of a fucose residue from a donor substrate to an acceptor substrate. The fucosyltransferase polymucleotides and polypeptides are useful for the synthesis of oligosaccharides, glycoproteins and glycoligids. The present sequence is Helicobacter pylori fucosyltransferase protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   225 EFLSQYKFNLCFENSQGYGYVTEKILDAYFSHTIPIYWGSPSVAKDFNPKSFVNVHDFNN 284

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This sequence represents an alpha-1,3/4-fucosyltransferase protein which was used in the method of the invention for producing a fucosylated glycoprotein. The method involves contacting a recombinant fucosyltransferase protein with a mixture comprising a donor substrate which comprises a fucosyl residue, and an acceptor substrate on a glycoprotein, under conditions such that the fucosyltransferase protein catalyzes the transfer of the fucose residue from a donor substrate to the acceptor substrate to the glycoprotein. The method is useful for producing fucosylated glycoprotein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Producing fucosylated glycoprotein, by contacting recombinant fucosyltransferase protein with mixture comprising donor substrate and acceptor substrate on glycoprotein.

```
Helicobacter pylori; strain 26695A.
```

The invention relates a purified transmembrane segment-free alpha 1,3fucosyltransferase polypeptide, having a repeat of the sequence: X\_1.X\_2fucosyltransferase polypeptide, having a repeat of the sequence: X\_1.X\_2fucusyltransferase polypeptide, having a repeat of the sequence: X\_1.X\_2Leu-Asg-X\_3-X\_4-Tyr, where X\_1, X\_2 and X\_4 is a Asp or Asn; and X\_3 is a

[1]. Val Or Ala. Also included are the mucleic acid encoding the protein

(including its complement or fragment), a vector containing the mucleic acid, a host cell modified with the mucleic acid or its a

producing transmembrane segment-free alphal, 3- fucosyltransferase,
comparising a host cell modified with the mucleic acid or its a

producing fucosylated oligosaccharides, such as Lex, Ley or SLex, by
contacting the protein with a substrate such as Lex, Ley or SLex, by
contacting the produced oligosaccharides, or by culturing the cell,
contacting the host cell with a substrate, to produce oligosaccharides
and purifying the obtained oligosaccharides, or by culturing the cell,
contacting the host cell with a substrate, to produce oligosaccharides
and purifying the obtained oligosaccharides, or by culturing the cell,
contacting the host cell with a substrate, to produce oligosaccharides
and purifying the obtained oligosaccharides, or by culturing the order cell with a substrate, to produce oligosaccharides
and purifying the obtained oligosaccharides, or by contacting a sample with a
nucleic acid probe that hybridises to alphal,3-fucosyltransferase fusion protein pyptient of producing a transmembrane segment-free alphal,3contacting the mucleic acid using polymerase chain reaction (PCR). The
host cell is useful for producing a transmembrane segment-free alphal,3cupptide under conditions which allow expression and secretion of the
corpetion protein and solating the fusion protein. The presence of fusion protein in a sample encoded and infactive of infection by Helicobacter pylori or the presence
of malignant cells. The antibody is also useful as
fuco fucosyltransferase gene regulation. Oligosaccharides synthesised using the protein or cell are useful in the development of assays to detect mammalian tumours. The present sequence represents an H. pylori alphal, 3 fucosyltransferase encoded by the fucT gene. (Updated on 29-AUG-2003 to Purified transmembrane segment-free alphal, 3-fucosyltransferase polypeptide useful for producing fucosylated oligosaccharides. This invention relates to novel isolated polynucleotides and the encoded polypeptides thereof, which are related to the fucosyltransferase enzymes (Puth and PutB) of Helicobacter pylori (H. pylori). Specifically, it refers to alpha 1-3/4 fucosyltransferase enzymes that can be used to chemically synthesise glycoproteins and glycolipids with the desired oligosaccharide moieties (i.e. by transfer of a fucose residue to N-acetylglucosamine), such that they are useful in the preparation of glycoconjugates. The present invention describes how bacterial fucosyltransferase is unaffected by the sialyation status of the acceptor sugar, as opposed to the mammalian homologue, and furthermore, bacterially expressed enzymes offer a large cost saving relative to mammalian expression systems. This polypeptide sequence is an H. pylori strain 1111 FutA protein sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence represents an alpha-1,3/4-fucosyltransferase protein which was used in the method of the invention for producing a fucosylated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Producing fucosylated glycoprotein, by contacting recombinant fucosyltransferase protein with mixture comprising donor substrate and acceptor substrate on glycoprotein.
                                              New isolated polynucleotide encoding fucosyltransferase protein, usefu for synthesizing oligosaccharide moiety on a protein or lipid that is unglycosylated in its native form or for synthesizing glycolipids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             alpha-1; 3/4-fucosyltransferase; glycoprotein; fucosyltransferase; fucosyl; fucose.

                                                                                                                                                                                                                                                                                                                                                                                                          The present invention provides alpha-1,3/4-fucosyltransferase (also termed as fucosyltransferase) proteins and nucleic acids from various strains of Helicobacter pylori. This enzyme catalyzes the transfer of a fucose residue from a donor substrate to an acceptor substrate. The fucosyltranisferase polynucleotides and polypeptides are useful for the synthesis of oligosaccharides, glycoproteins and glycolipids. The present sequence is Helicobacter pylori fucosyltransferase catalytic domain (amino acids 27-417) protein fragment.
                                                                                                                                                                                                                                                                                                                                New isolated fucosyltransferase polynucleotides and polypeptides, useful for synthesizing oligosaccharides, glycoproteins, or glycolipids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      FutA; FutB; alpha 1-3/4 fucosyltransferase; glycoprotein; glycolipid; fucose; N-acetylglucosamine; glycoconjugate; enzyme.

The present invention provides alpha-1,3/4-fucosyltransferase (also termed as fucosyltransferase) proteins and nucleic acids from various strains of Helicobacter pylori. This enzyme catalyzes the transfer of a fucose residue from a donor substrate to an acceptor substrate. The fucosyltransferase polymucleotides and polypeptides are useful for the synthesis of oligosaccharides, glycoproteins and glycolipids. The present sequence is Helicobacter pylori fucosyltransferase protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated fucosyltransferase polynucleotides and polypeptides, useful for synthesizing oligosaccharides, glycoproteins, or glycolipids.
                         fucosyltransferase protein with a mixture comprising a donor substrate which comprises a fucosyl residue, and an acceptor substrate on a glycoprotein, under conditions such that the fucosyltransferase protein catalyzes the transfer of the fucose residue from a donor substrate to the acceptor substrate on the glycoprotein. The method is useful for producing fucosylated glycoprotein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Helicobacter pylori fucosyl transferase, FutA, protein, SEQ ID NO: 4.

The invention relates a purified transmembrane segment-free alpha 1,3-
tucosyltransferase polyappide, having a repeat of the Sequence: X.1-X.2-
Leu-Arg-X.3.X.4-Tyr, where X.1, X.2 and X.4 is Asp or Asn; and X.3 is
Leu-Arg-X.3.X.4-Tyr, where X.1, X.2 and X.4 is Asp or Asn; and X.3 is
Leu-Arg-X.3.X.4-Tyr, where X.1, X.2 and X.4 is Asp or Asn; and X.3 is
Leu-Arg-X.3.X.4-Tyr, where X.1, X.2 and X.4 is Asp or Asn; and X.3 is
Leu-Arg-X.3.X.4-Tyr, where X.1, X.2 and X.4 is Asp or Asn; and X.3 is
Leu-Arg-X.3.X.4-Tyr, where X.1, X.2 and X.4 is Asp or Asp or Asi;
Inc. oronianing its complement or fragment), a vector containing the mucleic
Comprising a host cell modified with the nucleic acid or its
comprising a host cell modified with the nucleic acid or its
comprising the produced oligosaccharides, such as Lex, Ley or SLex, by
compacting the produced oligosaccharides, such as Lex, Ley or SLex, by
contacting the produced oligosaccharides, or by culcuring the cell,
contacting the botaciel with a substrate, to produce oligosaccharides
and purifying the obtained oligosaccharides. The nucleic acid is useful
contacting the obtained oligosaccharides. The nucleic asmple with a
producing decetting the nucleic acid, by contacting a sample with a
contacting the nucleic acid, by contacting a sample with a
polymcleotide, and detecting phyridisation of the probe; or by
multiying the nucleic acid using polymerase chain reaction (PCR). The
multiying the nucleic acid using polymerase chain reaction (PCR). The
cucosyltransferase-fusion prodein, by growing the host cell containing a
cucosyltransferase-fusion prodein, by growing the protein in the ample of the protein in a sample. The presence of the protein in a sample of the cucosyltransferase gene product activity. The nucleic of malignant cells. The antibody is also useful for diagnosing disorders
cucosyltransferase gene redulation. Oligosaccharides synthesised using
the protein or cell are useful in the development of assays to detect
cucosyltransferase encoded by the fuel of gene (Up

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Description

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ઠે
                                                                                                            Sequence 8, Application US/09733524A

Patent No. 6534298
GENERAL INFORMATION:
APPLICANT: Taylor, Diane E.
APPLICANT: Taylor, Diane E.
APPLICANT: Taylor, Diane E.
APPLICANT: Ge, Zhongming
TITLE OF INVENTION: NUCLEIC ACIDS ENCODING ALPHA-1,3
TITLE OF INVENTION: EVERESSING THEM (amended)
TITLE OF INVENTION: EVERESSING THEM (amended)
TITLE OF INVENTION: EVERESSING THEM (amended)
CURRENT APPLICATION NUMBER: US/09/733,524A
CURRENT PILING DATE: 2000-12-07
PRIOR FILING DATE: 1998-06-05
PRIOR FILING DATE: 1998-06-06
NUMBER OF SEQ ID NOS: 27
SOOTWARR: PASELSEQ for Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                APPLICANT: Taylor, Diane E.

APPLICANT: Taylor, Diane E.

APPLICANT: Ge, Zhongming
TITLE OF INVENTION: WUCLEIC ACIDS ENCODING ALPHA-1,3
TITLE OF INVENTION: EXPRESSION SYSTEMS FOR MAKING AND
TITLE OF INVENTION: EXPRESSION THEM (amended)
TITLE OF INVENTION: EXPRESSION THEM (amended)
TITLE OF INVENTION: EXPRESSION THEM (amended)

Sequence 15, Application US/09733524

Sequence 15, Application US/09733524

Patent No. US20020068347A1

GENERAL INFORMATION:

APPLICANT: The Governmers of the University of Alberta, a Canada Corporation

APPLICANT: Taylor, Diane E.

APPLICANT: Ge, Zhongming

TITLE OF INVENTION: WUCLEIC ACIDE ENCODING ALPHA-1,3

TITLE OF INVENTION: PUCOSYLTRANSFERASES AND EXPRESSION SYSTEMS FOR MAKING AND

TITLE OF INVENTION: EXPRESSING THEM

TITLE OF INVENTION: EXPRESSING THEM

TITLE OF INVENTION: WUMBER: US/09/733,524

CURRENT FILING DATE: 1998-06-05

PRIOR APPLICATION NUMBER: 60/048,857

PRIOR APPLICATION NUMBER: 60/048,857

PRIOR APPLICATION NUMBER: 60/048,857
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
